-! FUNCTION: THE HEPRAIN-BINDING GROWTH FACTORS ARE ANGIOGENIC AGENTS IN VIVO AND ARE FOTENT MITOGENS FOR A VARIETY OF CELL TYPES IN VITRO. THERE ARE DIFFERENCES IN THE TISSUE DISTRIBUTION AND CONCENTRATION OF THESE 2 GROWTH FACTORS.

-! FUNCTION: THE HEPARIN-BINDING GROWTH FACTORS ARE ANGIOGENIC AGENTS.

IN VIVO AND ARE POTENT MITOGENE FOR A VARIETY OF CELL TYPES IN VITRO. THERE ARE DIFFERENCES IN THE TISSUE DISTRIBUTION AND CONCENTRATION OF THESE 2 GROWTH FACTORS.

-!- SUBDINT: MONOMER.

-!- MISCELLANEOUS: THIS PROTEIN BINDS HEPARIN MORE STRONGLY THAN DOES

protein - protein database search, using Smith-Waterman algorithm Tue Aug 29 15:42:01 2000; MasPar time 16.51 Seconds 734.932 Million cell updates/sec MPsrch\_pp ou:

laxular output not generated.

>US-09-121-012B-3 (I=175) from US09121017B.pep 1265 1 MSRGAGRVQGTLQALVFLGV......PRTHYGQRAILFLPLPVSSD 175 Description: Perfect Score: Sequence:

Scoring table:

PAM 150 Gap 11

Searched:

225878 seqs, 69334122 residues

Post-processing:

Minimum Match 0% Listing first 45 summaries

Database:

spirembil2 ... sp.bacteria 3:sp\_fungi 4:sp\_human 1:sp\_archea 2:sp\_bacteria 3:sp\_fungi 4:sp\_human 5:sp\_invertebrate 6:sp\_mammal 7:sp\_mhc 8:sp\_organelle 9:sp\_phage 10:sp\_plant 11:sp\_rodent 12:sp\_unclassified 13:sp\_vertebrate 14:sp\_virus

Mean 43.118; Variance 70.257; scale 0.614 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

### ALIGNMENTS

This sequence represents acidic fibroblast growth factor (aFGF).

aFGF, or its fragments may be used in a synergistic comp.sn. with an antivizally active sulphated polysaccharide, and one or more exciplents. The compsn. may be used to control herpes simplex virus (HSV-1 or -2) herpes varicella/zoster; cytomegalovirus; influenza; human respiratory syncytial virus; Semliki Forest virus; HIV or Moloney Sarcoma virus. The combination of aFGF with sulphated polysaccharide is found to have a greater antiviral activity than expected for an additive effect. See also R25913-5. Human acidic fibroblast growth factor.

Viral infections; viruses; FGF; herpes simplex virus; HSV-1; HSV-2; herpes varicella; herpes zoster; cytomegalovirus; influenza; human respiratory syncytial virus; Semliki Forest virus; HIV; human immunodeficiency virus; Moloney Sarcoma virus. Synergistic antiviral composition contains BFGF and sulphated by Oysaccharide - for treating viral infections e.g. HSV-1 and -2, cytomegalovirus, HIV, influenza virus etc. Disclosure; Page 4; 20pp; English. 30-JAN-1992; 101541. 31-JAN-1991; GB-002145. 09-JAN-1992; GB-000410.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   sites, etc. This synthetic gene was mutagenized to obtain a gene encoding a human recombinant aFGF (R74647) having activity sequence 140 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New recombinant human acidic fibroblast growth factor - used to promote cell growth, to promote wound healing, for vascular grafts and blood vessel repair.

Claim 2; Column 30; 25pp; English.

Oligonucleotides were synthesized on the basis of the amino acid sequence of bovinne acidic fibroblast growth factor (aFGF) and used to produce a synthetic gene (given in Q88233) incorporating codons preferred by E. coli or mammalian cells, unique cloning
                                                                                                                                                                                                                                                                                                                                                                                                         25-SEP-1995 (first entry)
Human recombinant aFGF.
Acidic fibroblast growth factor; aFGF; vulnerary; anglogenesis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Length 140;

FGF mutein prepr. useful for therapy of burn or thrombosis - by transformation of lymphocyte-contained animal cell by vector contq. DNA encoding FGF mutein
Disclosure; Page 3; 23pp; Japanese.
The invention covers muteins of FGF (esp. bFGF) which contain at least one glycosylation site. The muteins can be used to treat burns and thrombosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              63 QYLAMDIDGLLYGSQIPNEECLFLERLEE-----NHYNTYISKKHAEKNWFVGLKKNGS 116

                                                                                                                                                             Isolated, putified, biologically active bovine beta endothelial cell growth factor - useful to regenerate or treat damaged blood vessels bisclosure; Fig 8: 28pp; English.

Bovine beta endothelial cell growth factor (beta-ECGF; W0399) having a mol.wt. of 20 kD can be purified at least 16300 fold from bovine brain using hepatin-Sepharose affinity chromatography. ECGF is useful for, among other purposes, diagnostic applications and has potential in the treatment of damaged blood vessels or other endothelial cell-lined structures.

Human ECGF (737503) or fragments may be obtained using oligonucleotides (737504 to 737508) whose design is based on the sequence of bovine alpha- and beta-ECGF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          63 QYLAMDTDGLLYGSQTPNEECLFLERLEE-----NHYNTYISKKHAEKNWFVGLKKNGS 116

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Mitogenic polypetide isolated from human brain tissue - useful for increasing vascular effect in eg wound healing, or generating endothelial cell linings for vascular prostheses, etc. Claim 3; Page 1; 31pp; English.
The PF of the invention was obtd. from human brain tissue. It has a mol. wt. of 15,200-16,500 (pref. 15,616-16,056) and has a high affinity for heparin. PFl and fragments are useful for promoting the growth of mesoderm-derived cells or neuroectoderm-derived cells and generating endothelial cell linings for vascular prostheses (all claimed). The polypeptides are useful for increasing vascularisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           13-JUN-1991 (first entry)
Sequence of human proteinaceous factor (PFI) with mitogenic activity.
Cell growth promoter; mitogen; vascularisation; wound healing.
Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                      18 LLDANYKKPKLLYCSNGGHFLRILPDGTVDGTRDRSDQHIQLQLSAESVGEVYIKSTETG 97

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Anti-acid antibody, for cancer diagnosis, etc. - is obtd. by using complex of partial peptide(s) of acid fibroblast growth articles as antigen.

Tactor and protein as antigen.

Disclosure: Fig 1: 19pp: Japanese.

The was deduced from a gene used to produce recombinant aFGF.

The was deduced from the protein, esp. from A-D can be used to as antigens to produce anti-aFGF antibodies. The peptides must comprise 8-10 continuous AAs from A or B (claims 5 and 6 resp.),

7-10 continuous AAs from C (claim 7), or 8-9 continuous AAs from D comprise 8). The Abs can be used for immunochemically measuring aFGF, and for purifying aFGF. They are useful as reagents in the diagnosis of various cancers or diseases of the CNS. Purified aFGF, has wound healing and nerve cell proliferating properties.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ద
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The synthetic arcg gene incorporates useful restriction sites at frequent intervals to facilitate the cassette mutagenesis of selected regions. Also included are flanking sites to simplify the incorporation of the gene into any expression system. The arck mol. acts in a cascade effect to control endothelial cell activity either co-ordinately through synergistic effects or via independent routes. The regulation of endothelial cells is essential for thrombogenesis. Their stimulation and control by these factors is also thought to be important in the development of tumours and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  20-APR-1999 (first entry)
Human beta-endothelial cell growth factor (ECGF) protein sequence.
Endothelial cell growth factor; ECGF; cleavable; recombinant; repair; regenerate; blood vessel; endothelial cell; human.

growth factor - useful for producing recombinant endothelial cell growth factor proteins
Glaim 1; Column 16; 23pp; English.

This represents the amino acid sequence of human beta-endothelial cell growth factor (EGGF). The invention is directed to DNA encoding alpha or beta-EGGF and plasmids comprising the DNA sequences. The DNA encodes a cleavable signal peptide and an EGGF, where removal of the signal peptide yields a mature form of the EGGF. The DNA is used to produce recombinant ECGF proteins, which can be used in treatments to repair or regenerate blood vessels or other structures lined with endothelial cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Isolated, purified, biologically active bovine beta endothelial cell growth factor - useful to regenerate or treat damaged blood vessels bisclosure; Fig 8; 28pp; English and the beta-endothelial cell growth factor (beta-ECGF; W0399) having a mol.wt. of 20 kD can be purified at least 16300 fold from bovine brain using heparin-sepharose affinity chromatography. ECGF is useful for, among other purposes, diagnostic applications and has potential in the treatment of damaged blood vessels or other endothelial cell-lined structures. Human ECGF (137503) or fragments may be obtained using oligonucleotides (T37504 to T37508 to T37509) whose design is based on the sequence of bovine alpha- and beta-ECGF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              OYLAMDTDGLLYGSQTPNEECLFLERLEE-----NHYNTYISKKHAEKNWFVGLKKNGS 130

Human beta-endothelial cell growth factor.
Human beta-endothelial cell growth factor.
Human beparin cell growth factor, ECGF; blood vessel; regeneration; heparin-Sepharcs affinity chromatography; probe; oligonucleotide; EGF; fibroblast growth factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  17 LPPGNYKKPKLLYCSNGGHFLRILPDGTVDGTRDRSDQHIQLQLSAESVGEVYIKSTETG

Claim 1: Column 16: 22pp: English.

Human recombinant endothelial cell growth factors (ECGF) beta

Human recombinant endothelial cell growth factors (ECGF) beta

They can be produced in transformed prokaryotic or eukaryotic host
cells using DNA sequences (T4598 and T45984, respectively) derived

from the complete human ECGF CDNA (T45985). Large quantities of

the ECGFs are produced by culturing the host cells and recovering

the proteins. ECGFs have utility in the growth and amplification

of endothelial cells in culture. They can potentially be used to

treat damaged blood vessels and other endothelial cell-lined

structures, and also have diagnostic applns.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Recombinant human endothelial cell growth factors - for treating

cell growth factor polypeptides cell growth factor polypeptides cell growth factor polypeptides cell mi; Column 16; 23pp; English.
This sequence represents the amino acid sequence of the mature human beta endothelial cell growth factor (b-ECGF). This amino acid sequence is identical to the alpha-ECGF but the beta sequence contains an extra 20 N-terminal amino acids. The sequence was isolated from a human brain stem cell DNNA library using a probe designed based on fragments of the bovine ECGF (see W75416-W75418). The ECGF protein can be used in compositions for promoting wound healing. ECGF is also used to grow cells on a prosthetic device.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ä

Novel fusion proteins comprise FGF linked to saporin. FGF-1 to -9 may be used, pref. FGF-1 (R70812), FGF-5 (R70813), FGF-7 (R70814) or FGF-8 (R70815) muteins, in which at least 1 Cys residue is replaced by conservative Ser substitutions. The fusion proteins are potent cytocidal agents to cells bearing the FGF receptor.
